

Carlos Perez

I excel in creating ideas, and then making them happen. I believe a good developer should be able to do both back-end and front-end web development, which is precisely what I do. After I create an idea, I like to choose the tech needed, and then depending on the make-up of the team, I fill any front-end or back-end role needed. All in all, I love conceptualizing ideas, constructing them, and watching them go.
